Your trusted financial partner to grow the clean energy economy.

Save money. Save energy. Grow the green economy.

What is the Clean Energy Fund of Texas?

Clean Energy Fund of Texas is a financing provider for Texans of all backgrounds to pay for solar power, water conservation and other energy efficiency upgrades. As the first Texas green bank, Clean Energy Fund of Texas speeds up investments in energy efficiency, resiliency and renewable power – especially for Texas home and business owners that have been left out of the green economy.

Energy Burden

Texas is already a national leader in wind and solar energy, but not every Texan can access clean energy solutions. Limiting access to money-saving upgrades is inequitable and won’t get us far enough fast enough to fix the climate crisis. The kinds of energy efficiency upgrades that the Clean Energy Fund of Texas finances could save these Texans up to 30% off their monthly utility bills.

What Kinds of Upgrades are Financed?

From adding solar panels to your home or business to upgrading your lighting or HVAC system, we can help you finance improvements that will pay for themselves over time.

We focus especially on low and moderate-income households, multifamily properties and nonprofit organizations. Everyone should be able to save money, save energy and grow the green economy.

We also educate Texans and advocate with policy makers about the value of the green economy.

At the Clean Energy Fund of Texas, we kickstart efforts to save money for lower income households while boosting renewable energy, creating jobs and protecting the environment. As a financing provider for Texans of all backgrounds, we develop cost-effective ways for people to finance the installation of solar power, storage, water conservation and energy efficiency upgrades.

Billy Briscoe, executive vice president and chief operating officer of the Clean Energy Fund of Texas.

Who Is Involved?

An experienced, innovative group of green economy leaders oversee the Clean Energy Fund of Texas. Pioneering clean tech executive Stephen K. Brown II is the founder and chairman emeritus. Billy Briscoe is the executive vice president and chief operating officer. The Fund works with a network of financial services providers, vendors and contractors to accelerate the green economy.

6% of Texas households (3.8 million households) qualify as low-income

6→15% the percentage of these households’ total income spent on energy

41% beyond the recommended by the U.S. Department of Housing and Urban Development

The U.S. Environmental Protection Agency has begun granting billions of dollars in funding for green finance projects as part of the Greenhouse Gas Reduction Fund (GGRF). We are proud to partner with GGRF awardees, financial services firms and community groups and look forward to working with them to deploy this capital to low and moderate-income neighborhoods. Recent historic investments in green financial catalysts will drive clean energy and create jobs where they are most needed.

The Wright Family of Austin got a new roof with financing from Clean Energy Fund of Texas.

We’ve been crisscrossing the country meeting with leaders, promoting the need for clean energy investment in lower income and disadvantaged communities.

Meanwhile we are working with local contractors to get solar and other clean energy projects off the ground.
